

# Alimentatori per LED di segnalazione (MINILED - VDT)

## Power supply units for Signal LEDs (MINILED - VDT)

Alimentatori elettronici con tensione di uscita stabilizzata per moduli LED di segnalazione.

*Led driver with stabilized output voltage for LED modules.*

I led di segnalazione sono led con basse potenze (0,1 watt circa) e normalmente sono assemblati su moduli da alimentarsi a tensione costante, tipicamente 12-24Vcc, con collegamento in parallelo.

Nella scelta dell'alimentatore si dovrà sempre tenere conto della tensione di alimentazione e della potenza complessiva dei led applicati, verificando i dati di targa forniti dal costruttore stesso.

I led di segnalazione hanno come applicazione tipica la funzione di segna passo o decorativa, non essendo adatti ad essere utilizzati per illuminazione.

La regolazione dei led di segnalazione è possibile solo con l'utilizzo di alimentatori dimmerabili dedicati, come ad esempio il nostro articolo Jolly Powerminiled, Maxi Dali Powerminiled ed altri articoli presenti sul catalogo

### Power supply units for Signal LEDs (MINILED)

*Signal LEDs are low power LEDs (about 0.1 watt) and they are normally assembled on modules to be powered with direct current, typically 12-24Vdc, with parallel connection.*

*When choosing the power supply unit, always consider the power supply voltage and the total power of the LEDs applied, checking the plate data supplied by the manufacturer.*

*The signal LEDs are typically applied to indicate routes or as decorations, as they are not suitable to be used for illumination.*

*Signal LED regulation is possible only using specific dimmer power supplies, such as our Jolly Powerminiled, Maxi Dali Powerminiled and other items found in the VLM catalogue.*

# DIMMER JOLLY POWERMINILED

**Alimentatore elettronico dimmerabile con corrente di uscita stabilizzata per LED di potenza (in corrente) e LED di segnalazione (in tensione)**

**Electronic dimmer power supply unit with stabilised output current for Powerled (in current) ad Signal Led (in voltage)**

Alimentatore elettronico dimmerabile adatto ad essere impiegato sia con Led di potenza (POWERLED) che con Led di segnalazione (MINILED). Si tratta di un alimentatore per uso interno IP20, del tipo MULTIPOTENZA fornito di dip-switch i quali consentono la selezione della corrente di uscita. La regolazione avviene tramite pulsanti NA, una pressione breve per accendere e spegnere mentre una prolungata per aumentare o diminuire l'intensità luminosa. La regolazione si ferma automaticamente una volta raggiunti i livelli minimo e massimo (Stop al minimo / Stop al massimo). La lunghezza massima del cavo del pulsante all'ultimo Jolly Powerminiled deve essere contenuta in 15 metri. Sarà possibile collegare tra loro fino ad un massimo di 10 Jolly Powerminiled.

*Dimmable electronic transformer suitable for use with both the POWERLED and the MINILED. It is a transformer for internal use with IP20, MULTIPOWER type provided with dip-switches that allow the output current to be selected. Dimming is carried out by NO push buttons. Push briefly to switch on and off. Hold the push button to increase or decrease the intensity of the luminosity. Dimming automatically stops when the minimum and maximum levels have been reached (Stop at minimum / Stop at maximum). The maximum length of the push button cable to the last Jolly Powerminiled must be within 15 meters. They can be connected up to a maximum of 10 Jolly Powerminiled.*

É possibile integrare il Jolly powerminiled in sistemi Dali, con l'interfaccia DALI-LED (Codice RN1300). Con questa interfaccia è possibile collegare fino a 10 alimentatori Jolly Powerminiled  
 It is possible to integrate Jolly Powerminiled in Dali, systems with DALI-LED interface (Code RN1300). With this interface it is possible to drive up to 10 Jolly Powerminiled.

# DIMMER JOLLY POWERMINILED

## DATI TECNICI - TECHNICAL DATA

**JOLLY POWERMINILED** è un alimentatore per LED in grado di alimentare sia Led di segnalazione MINILED (gestione in tensione 10Vcc - 12Vcc - 24Vcc), sia Led di potenza POWERLED gestione in corrente (350mA - 500mA - 700mA). La modalità di funzionamento è possibile selezionarla mediante il DIP Switch posto al di sotto del coprimorsetto secondola tabella 1. L'apparecchiatura è per uso indipendente ed è comandabile in tre diversi modi:

- 1) Pulsante NA (NON fornito);
- 2) Segnale 1÷10Vcc;
- 3) Potenziometro (articolo DIM34 da ordinare separatamente);

### Caratteristiche generali

#### Ingresso

- Alimentazione: 220÷240Vac;
- Frequenza: 50÷60Hz;
- Corrente massima: 0,16A;
- Fattore di potenza:  $\lambda$  0,95;
- Temperatura ambiente:  $t_a = -20\div 50^\circ\text{C}$ ;
- Temperatura involucro:  $t_c = 75^\circ\text{C}$ ;
- Protezione amperometrica (resistenza fusibile non ripristinabile);
- Protezione contro le sovratensioni transitorie;
- Protezione contro i cortocircuiti (elettronica autoripristinabile);
- Protezione contro i sovraccarichi (elettronica autoripristinabile);
- Protezione termica (autoripristinabile);
- Risponde alle normative: EN61347-1 - EN61347-2-11 - EN61547 - EN55015 - EN61000-3-2

#### Uscita

- Isolamento EQUIVALENT-SELV;
- Morsetteria 1x1,5mm<sup>2</sup>;
- Selezione uscita corrente-tensione tramite DIP-Switch (Tabella 1);
- Potenza massima corrente;
- Tensione in uscita massima: 46Vcc;
- Possibilità di accensione LED al secondario.

#### Regolazione

- Con pulsante NA (NON fornito);
- Con segnale 1÷10Vcc;
- Con dimmer L.C. Relco serie DIM34 (da ordinare separatamente).

#### Definizione LED

**POWERLED** = Led di potenza controllati in corrente costante da 350 - 500 - 700 - 1050 mA, il collegamento di questi modelli di led deve essere realizzato in **serie**;

**MINILED** = Led di segnalazione controllati con tensione costante da 10 - 12 - 24 Vcc, il collegamento di questi modelli di Led deve essere realizzato in **parallelo**.

**JOLLY POWERMINILED** is a Led driver suitable for MINILEDs (at voltages of 10Vcc - 12Vcc - 24Vcc) and POWERLEDs (at current of 350mA - 500mA - 700mA).

The operating mode can be selected using the DIP switch situated under the terminal cover as shown in Table 1. The equipment is for stand-alone use and can be operated in three different ways:

- 1) Push-button NA (not supplied)
- 2) By 1÷10Vcc signal
- 3) By a potentiometer (article DIM34 to be ordered separately)

### General features

#### Input

- Power supply: 220÷240Vac;
- Frequency: 50÷60Hz;
- Maximum current: 0,16A;
- Power factor:  $\lambda$  0,95;
- Ambient temperature:  $t_a = -20\div 50^\circ\text{C}$ ;
- Casing temperature:  $t_c = 75^\circ\text{C}$ ;
- Amperometric protection (non-restorable fusible resistance);
- Protection against temporary overloads;
- Protection against short-circuiting (auto-resettable electronics);
- Protection against overloading (auto-resettable electronics);
- Thermal protection (auto-resettable);
- Corresponding to the standards: EN61347-1 - EN61347-2-11 - EN61547 - EN55015 - EN61000-3-2

#### Output

- QUIVALENT-SELV insulation;
- Terminal strip 1x1,5mm<sup>2</sup>;
- Selection of current outlet-voltage by means of a DIP-Switch (Table 1);
- Maximum output voltage: 46Vcc;
- Possibility of switching on LED at secondary unit.

#### Control

- By NA push-button (not supplied);
- By 1÷10Vcc signal;
- By DIM34 series L.C. Relco dimmer (to order separately).

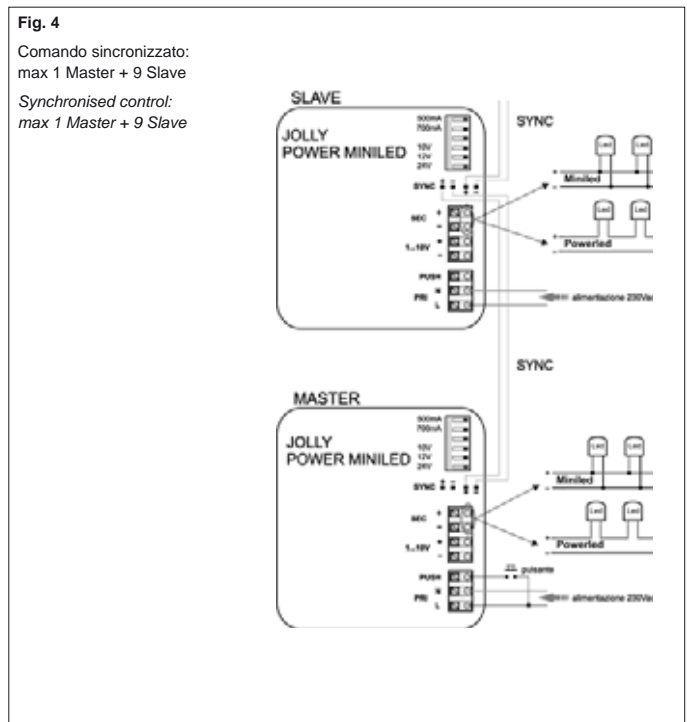

#### LED definition:

**POWERLED** = Power LED controlled in direct current from 350 - 500 - 700 - 1050 mA, these LED models must be connected **in series**.

**MINILED** = Signal led controlled with constant voltage from 10 - 12 - 24 Vdc, these LED models must be connected **in parallel**.

Potenza Power	Corrente Current	Tensione Voltage	Posizione DIP - DIP Position					
			1	2	3	4	5	6
15W	350mA	2÷43V	-	-	-	-	-	-
22W	500mA	2÷43V	-	-	-	-	-	ON
25W	700mA	2÷43V	-	-	-	-	ON	ON
8W	900mA	10V	-	-	ON	ON	ON	ON
10W	900mA	12V	-	ON	-	ON	ON	ON
20W	900mA	24V	ON	-	-	ON	ON	ON

# Powerled regolabili con varialuce tradizionale

## Dimmable Powerled with traditional dimmer

Serie di alimentatori adatti ad essere applicati su Led di potenza con gestione in corrente.

Alimentatori per uso indipendente e regolabili tramite dimmer (con tecnologia a TRIAC - leading edge solo per i modelli RN1406 e RN1408, o tecnologia ad IGBT - trailing edge per RN1407). Rispettare i dati di targa, posizionare l'alimentatore lontano da fonti di calore e verificare che la temperatura ambiente rientri nei valori indicati.

*Power supplies for current driven power LEDs.*

*Power supplies for independent use, dimmable by dimmer on primary (TRIAC technology - leading edge for RN1406 and RN1408 articles, or IGBT technology - trailing edge for RN1407)*

*Follow nominal specifications, place the power supply far from heat sources and verify the ambient temperature doesn't exceed the prescribed value.*
